RadBoard 1/2" x 3/4" Composite Pex Panel

1/2" Pex (Board Thickness – 3/4")

Combo boards (3/4" x 24" x 48")

Blanks (3/4" x 24" x 48")

- 3/4" Thick - designed for 1/2" Pex pipe, Aluminum & Paper coated Layers
- Single Combo Board - 2 ft. x 4 ft., allows straight runs, 180 & 90 deg. turns!
- Grooves are specially machined, so Tubing is SNAPPED into groove and STAYS! • It is NOT a straight channel, where tube is being deflected to OBLONG shape • NO tube pop-ups, NO Silicone to hold tube in place
- Product is manufactured locally – Encouraging OUR economy!
- No need to buy and install Rosin paper on top of the boards
- VISIBLE pipe when installing Hardwood Planks – Avoid Installation Damages! • Minimize Expansion/Contraction Noise
- RadBoard products are laminated with an Aluminum layer and Radpaper. The Radpaper replaces the rosin paper when installed with hardwood flooring. This reduces the noise created when Pex tubing expands and contracts, as well as eliminating noise created between the Radboard and the hardwood floor planks • Radboard Pex panel tubing - 8" on-center
